

G'Day, Mate! (Soaka Mesh Care)

Dingo! Not another Aussie invention, mate. Australia is famous world wide for hats. Just like yanks are well know for big cars and apple pie. These “ Soakable “ mesh hats can be worn **WET** ‘n wild or Dry as you wish.

1) SOAKA COOL MESH. The more you wear it the better it will fit and form to you. While thinner than Canvas, they are also cooler, more washable, and softer to wear. They can be washed in cool water with a sponge, and a small amount of mild soap every now and then to remove the salt (sweat) to prevent stains later on. Wear ‘em wet on your head! TRY IT – you will love it.

2) FIT on all hats. The Hat sizer – included in the box – goes under the sweatband at the front of the hat and will help you get a perfect fit. Some sweatbands attach via Velcro. Some sweatbands may need to be glued in – we suggest a hot glue gun. If the hat is a bit snug simply stretch over your knee. Tug with hand under the crown (inner stitching). It won't break.

All Hats ‘give’, stretch and shrink, with heat and wet. In other words – ***wear it a lot – and it will fit better.*** If you get it wet, and it dries too hot (next to the campfire), it'll be a bit tight the next wearing. Try this on purpose if you want to shrink a hat,. I recommend fishing in the rain, and letting it **dry on your head.** If you want a really good shrink – let it dry on the dash on the ride home with the defrost on high.

If a hat shrinks a bit much – a stretch over the knee will bring it back to size.

All of this is too confusing? ***Do nothing but wear it a lot – the more you use it, the better it will fit, seal up, and become an old friend for years to come.***

Enjoy your Walkabout Hat.
